## Superior flame resistance and arc flash protection

### NEW FROM PIONEER

**FlameTech™** premium materials have been developed by Pioneer to provide superior flame resistance and arc flash protection, and are designed especially for the needs of Canadian workers.

#### Features include:

- FR woven blend of 88% premium cotton and 12% nylon
- Combines the softness, breathability and comfort of cotton with the durability, strength and abrasion resistance of nylon
- Retains strength, FR and arc flash properties even after more than 100 washes
- Tested in Canadian labs to meet Canadian flame resistance and arc flash standards

#### What is TPP?

*TPP (Thermal Protective Performance):* Fabrics are tested with thermal energy to determine the level of energy needed to cause a second-degree burn injury. To pass *CGSB 155.20-2000* standards, a single-layer garment must have a minimum TPP value of 6. The higher the TPP value, the better the protection.

#### What are HRC and ATPV?

*HRC (Hazard/Risk Category)* is a rating indicating the electric arc resistance of a garment. The material is tested to determine the *ATPV (Arc Thermal Protective Value)*, which is the incident energy on a material or several layers of material resulting in a 50% chance of sufficient heat passing through said material(s) to cause a second-degree burn. The chart above shows the ATPV level required for each HRC class level.

HRC	ATPV
Class 1	Min. 4 cal/cm <sup>2</sup>
Class 2	Min. 8 cal/cm <sup>2</sup>
Class 3	Min. 25 cal/cm <sup>2</sup>
Class 4	Min. 40 cal/cm <sup>2</sup>

#### Other FR Standards:

*ASTM F1506-10a* – Standard Performance Specification for Textile Material for Wearing Apparel for Use by Electrical Workers Exposed to Momentary Electric Arc and Related Thermal Hazards. Testing includes flame resistance (25 washes), arc rating, tear resistance, breaking strength, seam slippage, colourfastness, and laundering shrinkage.

*NFPA 2112* – Standard on Flame Resistant Garments for Protection of Industrial Personnel Against Flash Fire. Specifies the minimum design, performance, certification and testing requirements for flame-resistant fabric and garments for use in areas at risk from flash fires. Testing includes flame resistance (100 washes), heat transfer performance, heat resistance, thermal shrinkage, flash fire resistance, tensile strength, tearing strength, laundering shrinkage and colourfastness.

### Understanding FR Standard CGSB 155.20-2000

*CAN/CGSB 155.20-2000* – Workwear for Protection Against Hydrocarbon Flash Fire. States the minimum requirements for performance of workwear worn for protection against unplanned exposure to hydrocarbon flash fire. Testing includes flame resistance (fabrics tested before and after wash/dry cycles), Thermal Protective Performance (TPP), heat resistance, and thermal shrinkage resistance. All components of the garments must meet required *CGSB155.20-2000* standards, not only the outer shell material.

#### The standard categorizes FR garments into 3 different types:

##### **TYPE 1 – Single-Layer Garments**

*Pioneer example:*

##### **5558A COVERALL**

*Protective garment constructed from a single fabric.*

Requirements include flame resistance before and after 50 washes, Thermal Protective Performance value of 6 or greater, heat resistance to 260°C, and thermal shrinkage of no more than 10%.

##### **TYPE 2 – Multilayer Garments**

*Pioneer example:*

##### **5522A WINTER PARKA**

*Protective garment consisting of outer shell fabric and inner lining fabric, and/or insulation material.*

Requirements include flame resistance before and after washing, Thermal Protective Performance (TPP) value of 5 or greater, heat resistance to 260°C, and thermal shrinkage of no more than 10%.

##### **TYPE 3 – Disposable Garments**

*Pioneer example:*

##### **578 RAIN SUIT**

Must meet flame resistance criteria before washing and should be worn over another approved FR garment. Exempt from all other requirements.

Lanyards

**POY STYLE (PARTIALLY ORIENTED YARN) LANYARDS**

The PeakWorks Shock Absorbing Lanyards are a POY style (Partially Oriented Yarn), eliminating the need for a shock pack. In the event of a fall the PeakWorks lanyard will ensure that the maximum arrest force is below 900 lbs. The PeakWorks lanyard is available in a variety of styles including single leg and double leg (100% tie-off). Each lanyard, each part are thoroughly tested during the product development stage and are batch tested to confirm conformance.

Series #	Description	Body	Anchor	Size
SA-1000-X	POY Single Leg	Regular	Regular	X = 4 or 6 ft
SA-1002-X	POY Single Leg	Regular	Form	X = 4 or 6 ft

Self-Retracting Lifelines

**SELF-RETRACTING LIFELINES (SRL)**

Self-retracting lifelines are flexible connectors that extend and retract using a spring locking mechanism similar to a seatbelt. Under normal use, the worker can move about while the SRL keeps the connection between the anchor and the harness snug. If the worker slips or falls, the mechanism locks up the SRL and prevents further extension of the lifeline.

SRL's are segregated into 3 classes:

Class 1 – under 10 feet (3m) in length

Class 2 – over 10 feet (3m) in length with shock-absorbing mechanism

Class 3 – over 10 feet (3m) in length with shock-absorbing mechanism and rescue retrieval

## Confined Space

The OHS Regulation defines a confined space as:  
 an area, other than an underground working area, that  
 (a) is enclosed or partially enclosed,  
 (b) is not designed or intended for continuous human occupancy,  
 (c) has limited or restricted means for entry or exit that may complicate the provision of first aid, evacuation, rescue or other emergency response service, and  
 (d) is large enough and so configured that a worker could enter to perform assigned work.

Confined spaces have limited openings for entry and exit, for example silos, vats, ship holds, sewers, tunnels, large pipelines and other such spaces that workers could enter to perform work.

## Services

### AUDIT

Every company is required to have a fall protection plan. A thorough fall protection plan must begin with an audit of the work site or facility. The PeakWorks audit process identifies all of the fall hazards at the workplace and reviews the current fall protection practices in place. A PeakWorks audit will recommend systems, products, and procedures to eliminate or mitigate the risk of working at heights.

### ENGINEERED SYSTEMS

Every PeakWorks engineered system is presented as a turn-key solution to our clients. The solution encompasses equipment, installation, training and certification. PeakWorks has experience in vertical and horizontal lifelines, rigid rail systems, guardrails, and permanent anchor points. Every project has a PeakWorks professional engineer in charge – which means your systems are certified. Our team of professional installers have been selected and trained by our in-house engineers, ensuring the highest level of competency. Our design and installation processes deliver satisfaction to our clients, while keeping project costs under control.

### INSPECTION & CLEANING

PeakWorks' RFID Inspection system is a fast, easy and reliable way to inspect your PPE. The RFID chip is the key to the system, integrating each piece of equipment with the product type, date of manufacture, serial number and relevant product standards. Each product type has a unique inspection process that conforms to the regulatory standards. PeakWorks' inspection customers receive a timely email informing them when equipment is due for inspection. Cleaning and inspection of fall protection equipment can prolong the life of your gear. PeakWorks offers a hassle-free approach to the cleaning and inspection of your PPE. Our team of experts can clean and inspect your PPE fast and conveniently—usually within a week. Our non-invasive cleaning process does not weaken reflective materials, stitching or seams. The colours of your items will not fade. Even materials like leather can go through the cleaning process.

From risk assessment through to installation and training, PeakWorks will customize an engineered system to match your requirements.

### Measurement Directions:

- Neck:** Measure around the base of your neck, round up to the next half-inch.
- Chest:** Measure around your chest, under the arms and across the shoulder blades, over a shirt if stomach is larger than chest; choose the larger size.
- Waist:** Measure around your waist at the level you normally wear your pants, over a shirt.
- Hip:** Standing with feet together, measure around the widest part of your hips, parallel to the floor.
- Inseam:** Measure a good-fitting pair of pants along the inseam, from crotch seam to bottom edge of cuff.
- Sleeve:** Bend arm and place fist on hip. Measure from centre back of your neck, across shoulder and down arm to elbow and then to your wrist. This is your sleeve length.

# CSA HIGH VISIBILITY SAFETY STANDARDS

The Canadian Standards Association's CSA Z96-09 High Visibility Safety Standard details the level of performance of garment componentry and design required to meet the standard classes and levels. The standard requires garment componentry to pass stringent testing including retroreflective performance, chromacity, luminance, colour fastness, resistance to shrinkage, bursting strength, tear strength, and water resistance (if applicable). Garment design elements and layout of retroreflective or combined-performance tape is another key part of the comprehensive standard. For more details, a copy of the standard can be obtained at [www.csa.ca](http://www.csa.ca).

**A simplified explanation of the CSA classes and levels for safety garments is as follows:**

---

## CLASS 1

Basic harness or safety tape over the shoulders and encircling the waist. Suitable in less complex work areas where workers are separated from car and truck traffic.

Ex.: Class 1 Level 2 = Class 1 tape configuration + non-retroreflective back ground material

*Pioneer item #5590 (V1040560), hi-viz yellow/green safety sash  
Pioneer item #6925BK (V1060471), black polyester fleece hoodie*

---

## CLASS 2

Full coverage of the upper torso including front, back, sides and over the shoulders. The background material must be high visibility. For use in more complex or low-light work areas requiring greater visibility.

Ex.: Class 2 Level 2 = Class 2 tape configuration + retroreflective background material

*Pioneer item #6935 (V1021150), hi-viz orange safety vest  
Pioneer item #6925 (V1060460), hi-viz yellow/green polyester fleece hoodie*

---

## CLASS 3

A Class 2 garment combined with arm and leg bands. The background material must be high visibility to the standard. Hi-viz coveralls meet this standard; safety jackets and pants can be worn combined, or arm/leg bands can be added to Class 2 garments, to attain Class 3. Suitable for use in complex work areas where low light, fast-moving traffic and inclement weather are safety factors.

Ex.: Class 3 Level 2 = Class 3 configuration + retroreflective background material

*Pioneer item #5999A (V1070161), hi-viz yellow/green traffic coverall  
Pioneer item #5518 (V1160150), hi-viz orange poly/cotton coverall*

*Safety officials in your region determine the appropriate class wear for specific job sites. Hazardous risk assessment should be performed by a qualified individual to determine the applicable high visibility classification.*

**STAR★TECH™**

**STAR★TECH™** reflective tape is exclusive to Pioneer safety products. It is designed and tested to far exceed the CSA Z96-09 high-visibility safety apparel reflective tape standard.

**STAR★TECH™** reflective tape has been independently tested to meet:

- CSA Z96-09 High-Visibility Safety Apparel Standard Level 2
- EN ISO 20471 High-Visibility Standard Level 2
- ANSI/ISEA 107-2010 Level 2

**STAR★TECH™FR** tape is made of FR cotton or aramid material as backing and has been independent lab tested to meet:

- CGSB 155.20-2000 Heat-Resistant Test Par. 6.2.3
- CSA Z96-09 High-Visibility Safety Apparel Standard Level 2

The many standards for reflective tapes all require passing a battery of tests that simulate working conditions.

These include measuring the retroreflective performance of **STAR★TECH™** tape after being subjected to: **abrasion, multiple flexing, cold temperatures, variable temperatures, multiple washings, wet conditions,** and, for the FR version, its **heat resistance** properties as well. Due to its premium design and quality, **STAR★TECH™** tape not only meets but exceeds all of these standards!

# JET GROUP

Since 1887, Pioneer has remained based in Vancouver, designing and developing products that thrive in the cold, rugged, mountainous and rainy environments of British Columbia, the Yukon and Alaska. The JET Group and Pioneer have since grown to become the largest supplier of safety gear and outerwear to Canadians in every Province and Territory from Coast to Coast to Coast.

## History

Pioneer was established in Vancouver over 127 years ago, just after the Great Fire of 1886 burned the city to the ground. It is commonly accepted that Charles Jones, the founder of Pioneer, constructed the tent that became Vancouver's post-fire City Hall. Using canvas from sailing ships, he also built many of the tents which housed residents left homeless by the disaster. The business grew rapidly, producing clothing, tents and other gear to outfit the sourdough prospectors heading for the 1898 Klondike Gold Rush. Throughout the 20th century and to the present day, Pioneer continues to outfit foresters, construction workers, miners, road and railroad builders, as well as outdoor enthusiasts of the Wild West and throughout Canada.
